How to use the built in authentication services
- Create a new project
- Use these commands:
  (bootstrap can be replaced with vue or react)
  - composer require laravel/ui
  - php artisan ui bootstrap –auth
  - npm install && npm run dev
  - npm install bootstrap@latest bootstrap-icons @popperjs/core --save-dev (for bootstrap installation)
  - npm install && npm run dev
    → now you should be able to register & login a user
- Add this route to web.php:
  - Route::get('/demo', [App\Http\Controllers\ HomeController::class, 'demo'])->name('demo');
  - Copy demo.blade.php into the views folder
    → now both /home and /demo should be protected

Multi-Guard-Authentication

- Create a new project
- Create an Admin Model with the columns of your choice
- Create Admin- and UserController:
  - php artisan make:controller Admin/AdminController
  - php artisan make:controller User/UserController
- replace Admin- and UserController files
- replace web.php (or add missing routes)
- replace auth.php (or add Admin guard)
- add views for admin and user:
  - dashboard/admin/home.blade.php,
  - dashboard/admin/register.blade.php,
  - dashboard/admin/login.blade.php
  - ...
- now you should be able to register both users and admins
